

TSLA
Tesla Inc

Gann believed that price at which a stock trades is the price that matters, not synthetic price history. Very few data vendors even offer "unadjusted" price history.

"Why is it important?" --Because as TSLA completed a Major Low in June 2024, it will now start moving "Back to the Future!" It will rally to retest that August 2020 High at 2318 by March 2028--in sync with the next 45-month cycle. The 45-month cycle gave you a Major Low in June at 167.41.

To understand why TSLA will become an \$8 trillion market cap by March 2028 you have to realize that Tesla robots driven by AI are replacing labor in their factories and the robo-taxi will change the auto industry more dramatically than anything since the birth of the auto industry. It is quite possibly the end of Detroit.

Why?--Because our Gann charts show that oil will spike to New Highs!! Rabid rise in oil prices will speed the transition to electric cars, benefiting Tesla at the expense of GM, Ford, Chrysler, Toyota, and the German auto makers. BYD will also do very well.

3.484 B shares outstanding
multiply by 2318 = \$8 Trillion market cap

TESLA

The chart displays Tesla's stock price from 2012 to 2028. It features candlestick bars representing daily price movements. Key annotations include:

- A red dashed line connecting the peak of the 2020 rally (around \$2,318) to the projected low in June 2024 (\$167.41), indicating a 45-month cycle.
- A green dashed line projecting a rally from the 2024 low towards a target of \$2,319.604 by March 2028, also based on a 45-month cycle.
- Vertical blue lines mark significant dates: 12/1/2016, 9/1/2020, 6/1/2024, and 3/1/2028.
- Horizontal green dashed lines mark price levels: 35.000, 101.810, 167.410, and 2,318.490.

Date	Price	Event / Annotation
3/1/2013	35.000	Start of initial uptrend
12/1/2016	-	Major Low
9/1/2020	-	End of 45-bar cycle starting from 2016 low
8/1/2020	2,318.490	Peak of 2020 rally
1/1/2023	101.810	Local peak
5/1/2024	167.750	Recent low
6/1/2024	167.410	Projected Major Low
3/1/2028	2,319.604	Target price after 45-bar rally from 2024 low

Gold Futures

A move to \$3167 might seem a bit crazy.
"How can Gold get so high in just over 2 months?"
Easy---We get an Oil Shock. You have seen my Brent and WTI reports. You know I'm expecting a big move up in oil. If Gold doesn't rally to \$3167 by September, it may trade "sideways" this summer and then start the spike move up from September as the 1st division of the 2nd square in time comes due. Need I remind you that this rally started in sync with the completion of a 144-month cycle into higher low by Sept 2023. The cycles are working!

"1924" is the level of the Sept 2011 Top. When Gold closes back above this level, you need to get more aggressively Long the Futures and/or mining stocks and look for Gold to rocket to \$3167 as Gold by Sept 2023.

Just what I said:
Gold should bottom out
halfway through the square
in time and start moving up
again here in December and
really spike higher in January
as the stock market slides.
